Dried canal: texture-only comparison

CANAL-MATERIAL-SHOOTOUT-20261023-01 / User selection required

The current cave shape, floor, 42m route, lighting, cameras, C9 quarry and C8 3x quarry sampling are preserved. Only cave wall/ceiling materials change in this private study.

All eight requested Poly Haven candidates are shown, plus Chipped Concrete and an earlier Quarry Wall control. The existing material remains unchanged as the baseline. No candidate has been made the WIP or public default.

Every numbered comparison is an actual browser capture on the same mesh. Fixed development cameras hide review controls for an unobstructed surface comparison. The raw PNG gallery includes exact camera, FOV, tier and DPR metadata.

1x uses a common 2.023m square tile; 2x means 4.046m, with fewer repeats, on the six scale-study candidates. Native scan coverage is separately documented (1-5.40m, including the quarry control). The current baseline retains its exact existing sampler.

This material-only experiment cannot change the organic cave silhouette into the constructed canal arch in the reference. Existing faceted joins and visibility limitations remain. No new final graffiti or ceiling fixtures are added.

Software-rendered SwiftShader evidence is not physical laptop/phone performance acceptance. See the technical report for loading, memory and regression results.

User references: material appearance only

Phone UI and capture glare are not lighting or geometry targets

Dusty grey-beige coating; matte pitting and mineral wear. Retain the existing rock shapes.

All materials / landing camera

Actual cave renderings, not source swatches. Full-resolution PNGs in gallery.
