Natural cave and tunnel / review

BREEZE 2027 / PRIVATE CAVE CANDIDATE

Private candidate only. C9 + approved 3× rock material are preserved. No public promotion, commit or deploy.

The 42 m rocky passage and local mouth-clearance repair are implemented. No large physical entrance lettering and no visible ceiling/hanging lights.

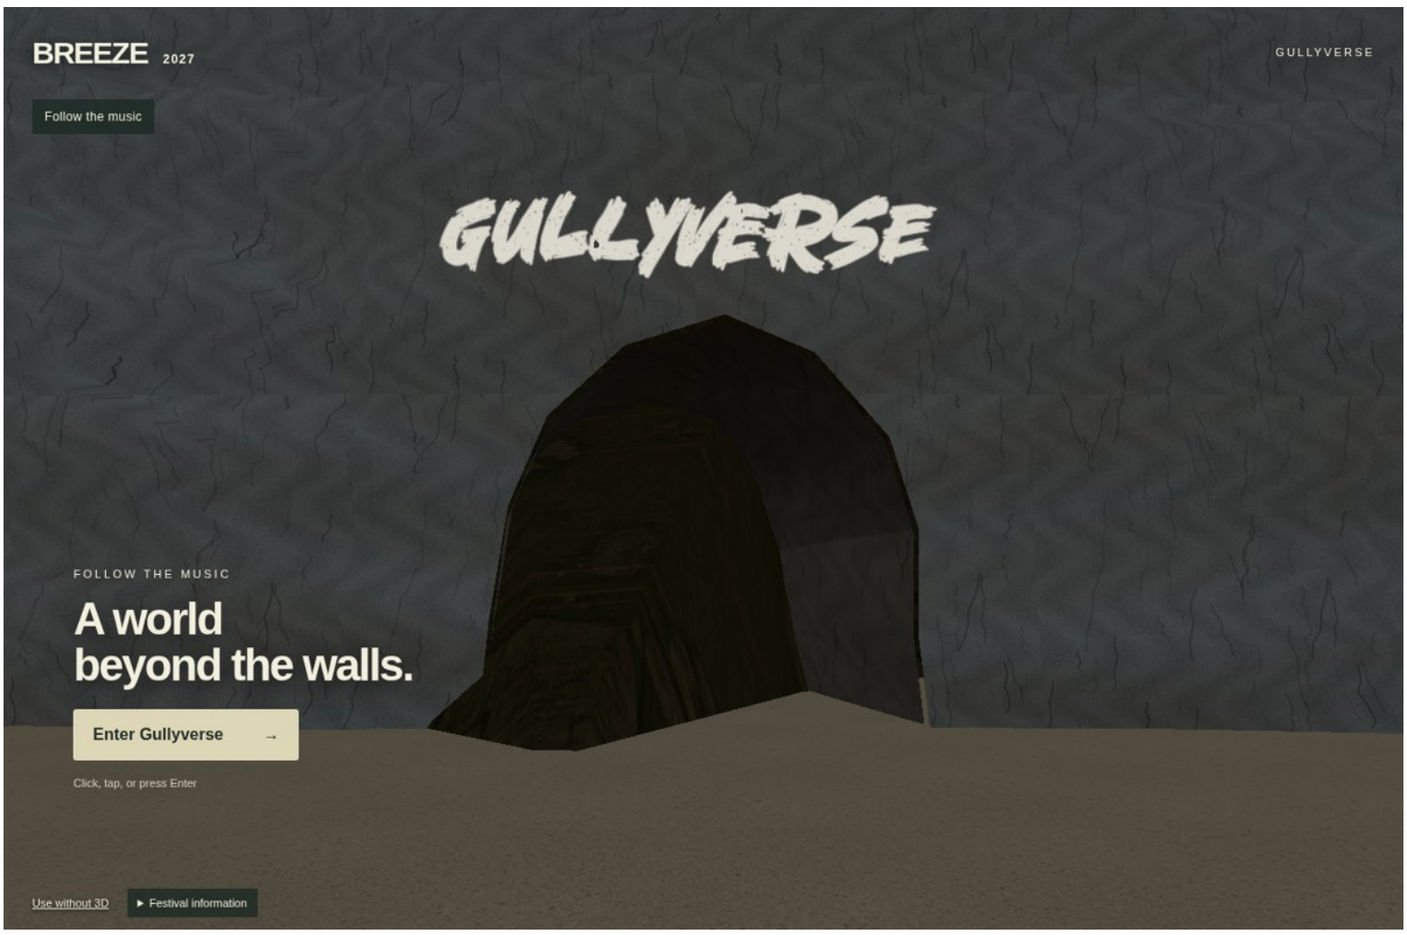

Art is not production-ready: the mouth return still looks engineered, some captured edges read thin, and floor contacts remain too clean. Exact artwork for all seven artists is pending.

Build/type/lint and97 units pass. New cave geometry/LOD gates pass; seven inherited quarry visibility defects and physical-device performance remain outstanding. Read the technical report for all browser/deadline results.

entrance neutral geometry

BREEZE 2027 / PRIVATE CAVE CANDIDATE

Temporary neutral lights and grey material; all fine/PBR maps off. Actual browser geometry.

Temporary diagnostic only. The neutral entrance exposes a smoother joining collar and thin scan edges; successful geometry checks do not establish art acceptance.

tunnel neutral geometry

BREEZE 2027 / PRIVATE CAVE CANDIDATE

Neutral material/lighting, textures off; actual full tunnel physical relief.

Temporary diagnostic only. The neutral entrance exposes a smoother joining collar and thin scan edges; successful geometry checks do not establish art acceptance.

tunnel unfiltered ambient

BREEZE 2027 / PRIVATE CAVE CANDIDATE

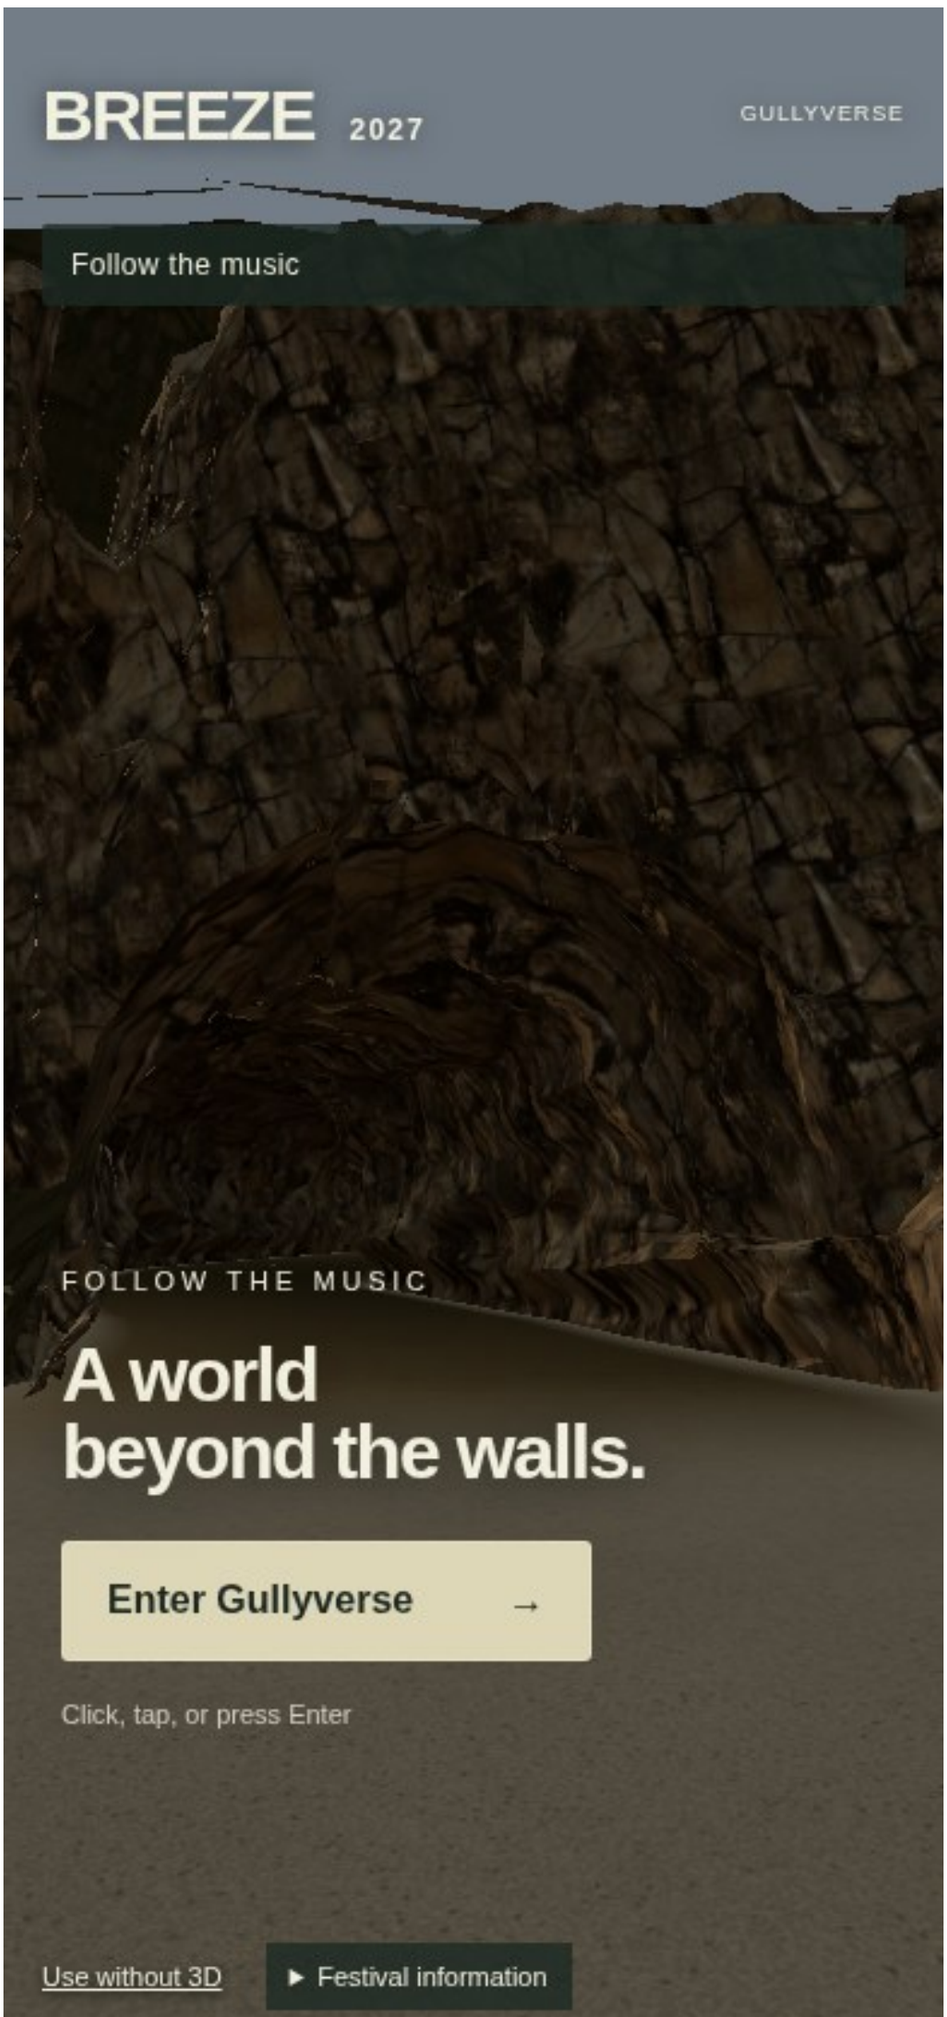

Temporary local opening response off. Same geometry, maps and approved global lights; not the default.

Temporary diagnostic only. The neutral entrance exposes a smoother joining collar and thin scan edges; successful geometry checks do not establish art acceptance.

Mobile aspect / Actual landing interface

BREEZE 2027 / PRIVATE CAVE CANDIDATE

390×844 / DPR1 / Q0 / browser aspect, not physical phone verification.

Mobile aspect / First tunnel section

BREEZE 2027 / PRIVATE CAVE CANDIDATE

Mobile aspect / Mid passage

BREEZE 2027 / PRIVATE CAVE CANDIDATE

390×844 / DPR1 / Q0 / browser aspect, not physical phone verification.

Stop for visual review

Do not promote this candidate to public-default rendering. C9 remains the selected quarry and all earlier comparisons remain intact.

The entrance is not yet as thick, eroded or naturally integrated as the supplied concept/photos. Some tunnel surfaces still follow a regular cross-section; the floor is too clean and its contact too crisp.

Final exact artist PNGs are missing for Neha Kakkar, Khullar G, Nikhitha Gandhi, Ritviz, Twin Strings, Chaar diwari and Yellow diaries. No generic artwork was invented. Artwork close-up/readability approval cannot be claimed.

Seven inherited C9/terrain defects remain. SwiftShader diagnostic frame rates are not real laptop or phone FPS. The full report preserves failed attempts and the cold-stage preparation limitations.

The Drive checkpoint includes editable Blender source, runtime GLBs, source/tests, evidence and exact prior dependencies. Use the separate final verification receipt and independent restore result.

Next action: user visual review, followed by a separately authorized bounded correction or artwork integration. No Stage3B has started.
