Your iPhone review guide

PDF + original screenshots + H.264 MP4 walkthrough

What changed

Two adjoining limestone wall sections were reshaped into one continuous geological volume. The rest of the quarry is unchanged.

What stayed locked

The approved limestone maps, colour, lighting, quarry footprint, stage, scaffold and navigation are preserved. The public default still uses Stage 2C.

How to review

Swipe through the matched pairs and pinch to zoom. This PDF uses high-quality image compression for a smaller download. All original PNGs are in the ZIP.

On your iPhone

Save this PDF to Files or Books. Open the MP4 in Files. Tap the review ZIP in Files to extract all original PNGs, metadata and the report.

About the video

Actual browser inspection-camera travel alongside the wall, followed by the public aerial map. It is an inspection path, not a demonstration of ordinary walking bounds.

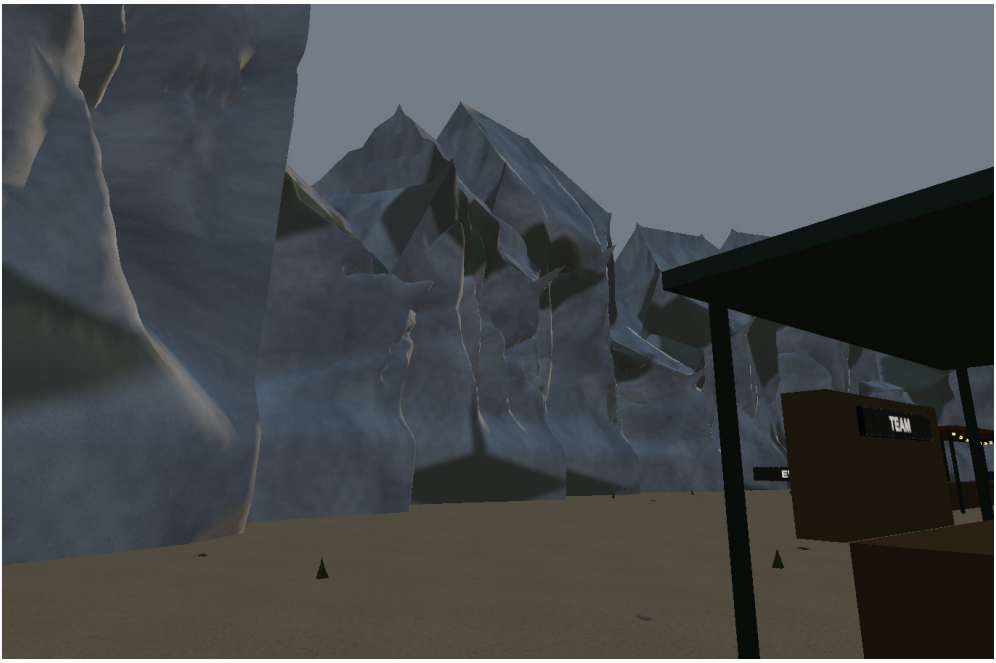

Device testing

Phone-sized captures use browser emulation. Physical iPhone, Android and hardware-GPU performance remain pending. The recording used software rendering.

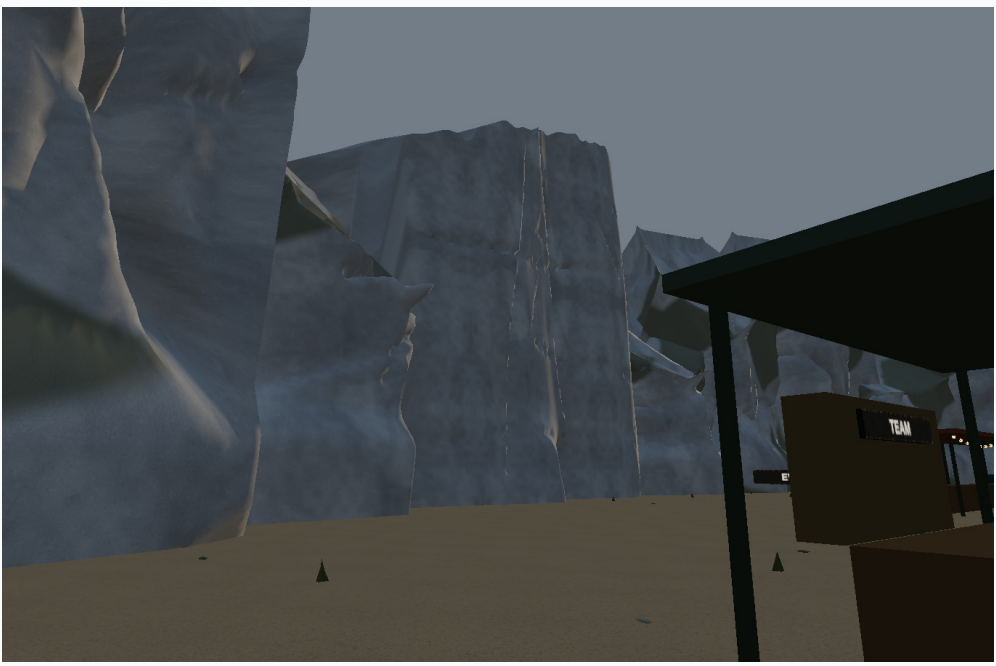

01 Wall at the same camera

Matched camera, lighting, viewport, quality and effective DPR

BEFORE - existing Stage 2C

AFTER - refined sections 22 + 23

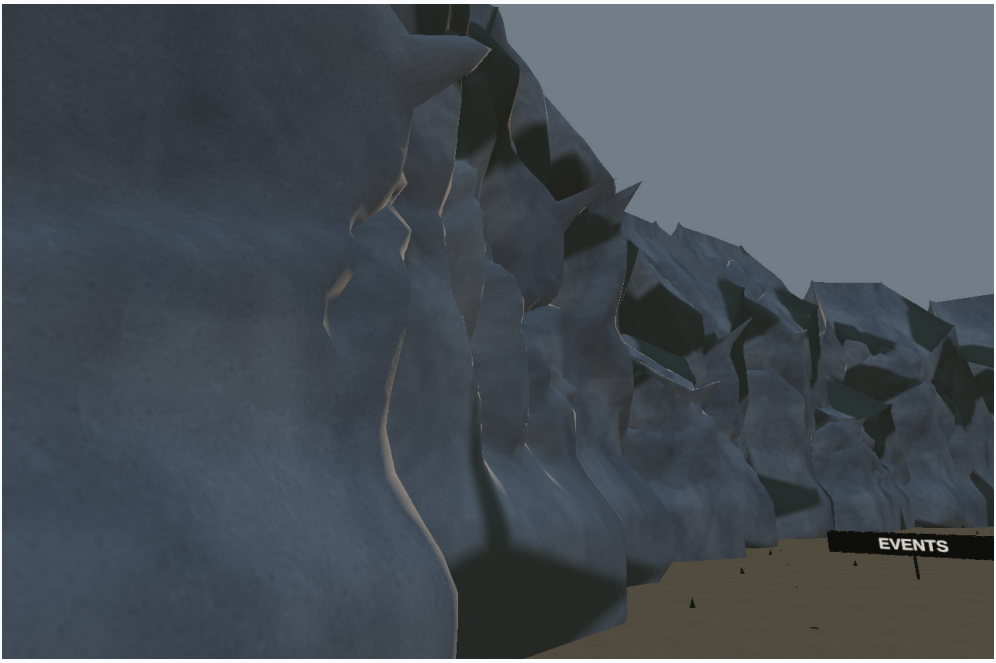

Compare broad wall shape and the upper contour.

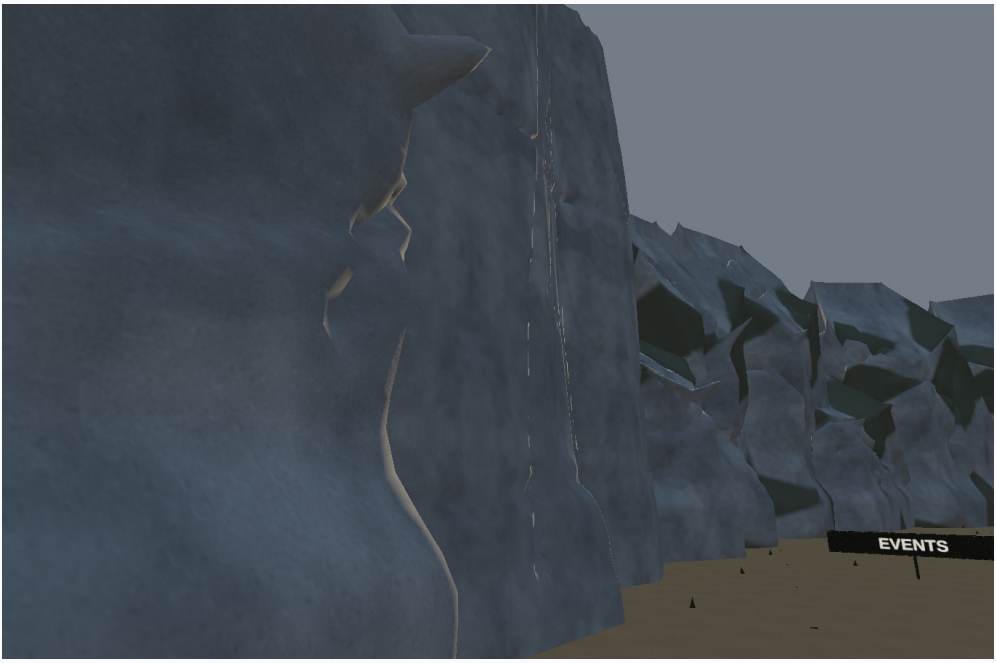

02 Two-section connection

Matched camera, lighting, viewport, quality and effective DPR

BEFORE - existing Stage 2C

AFTER - refined sections 22 + 23

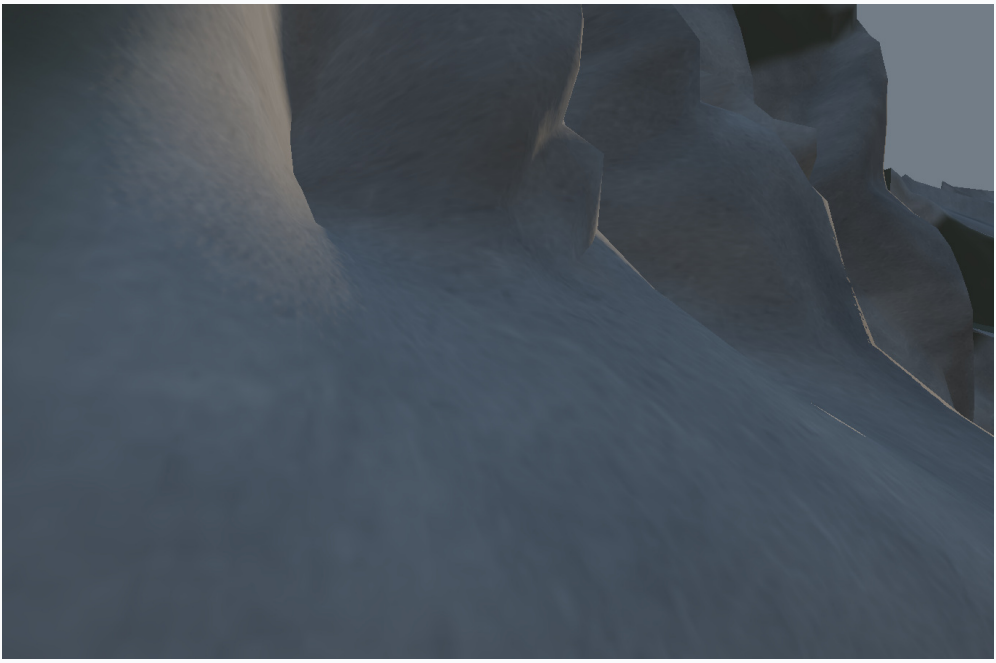

Check that the adjoining sections read as one formation.

03 Close-up fractures

Matched camera, lighting, viewport, quality and effective DPR

BEFORE - existing Stage 2C

AFTER - refined sections 22 + 23

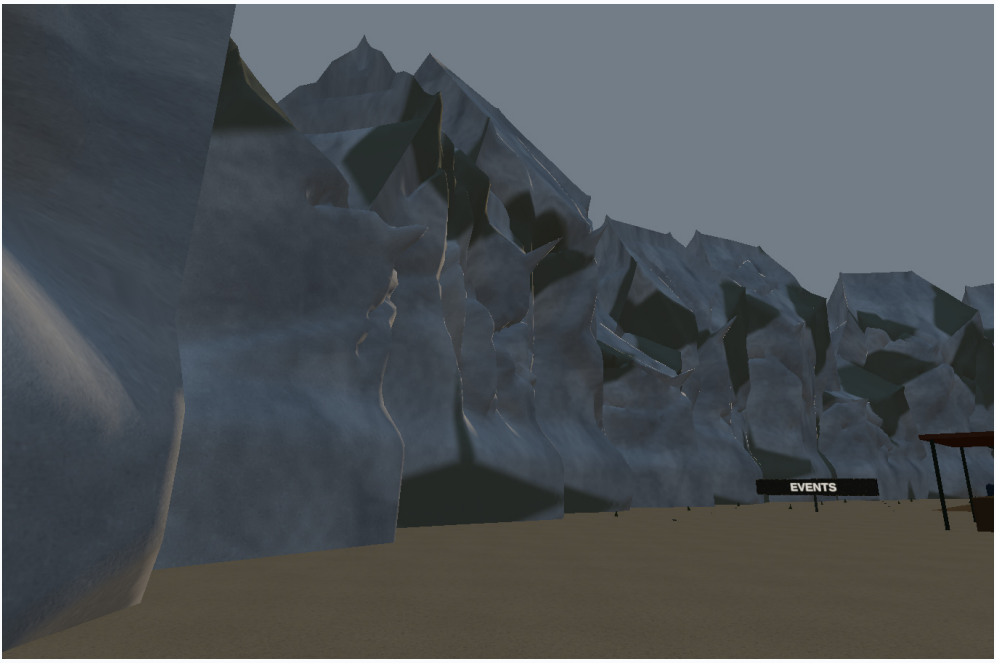

Check chipped edges and the locked limestone surface grain.

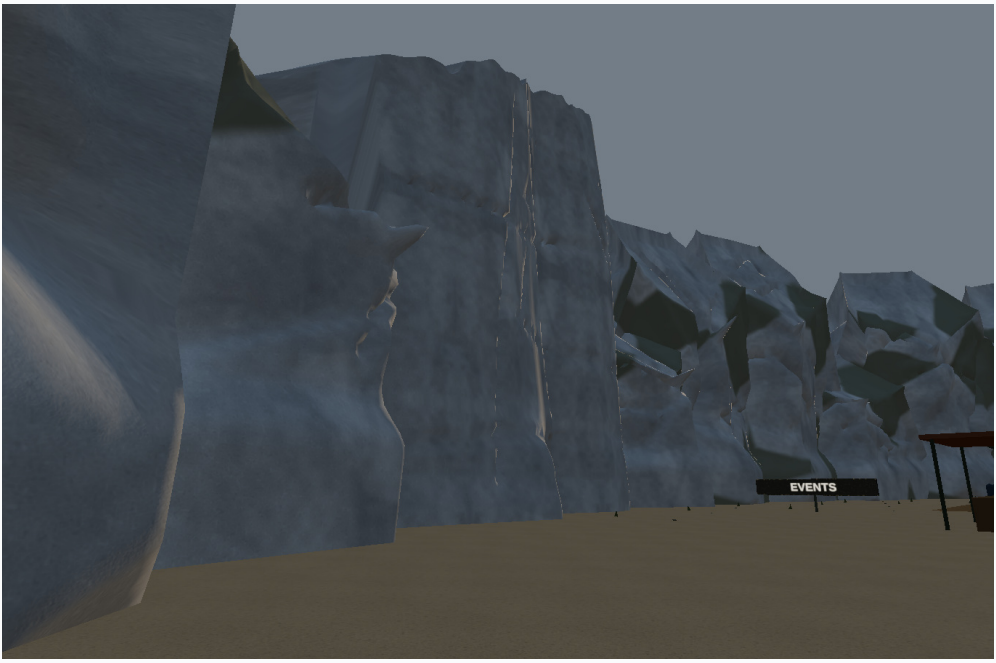

04 Medium-distance wall

Matched camera, lighting, viewport, quality and effective DPR

BEFORE - existing Stage 2C

AFTER - refined sections 22 + 23

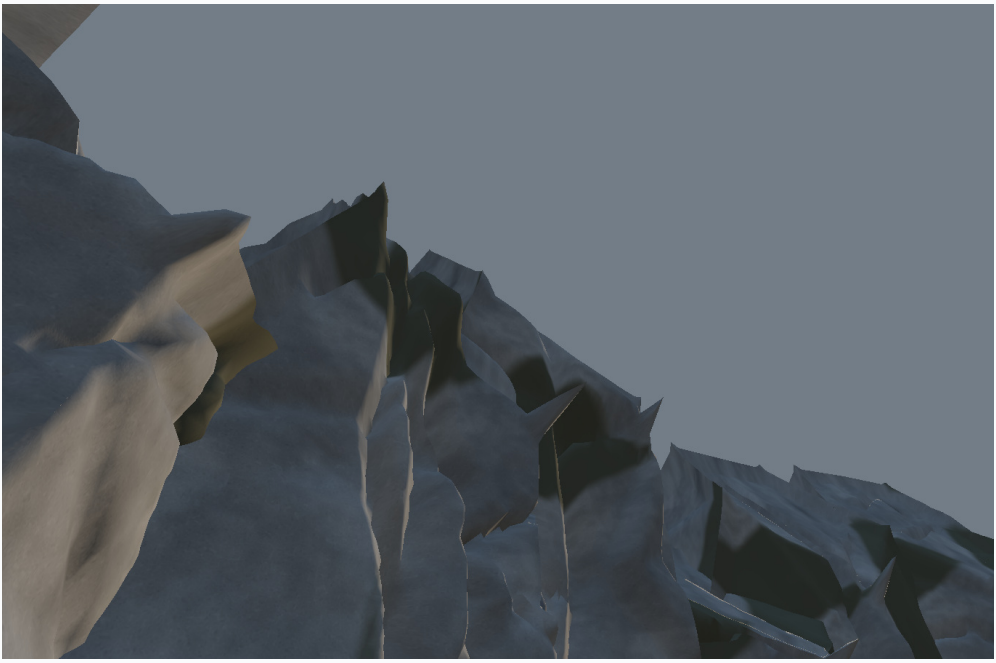

Judge the geology at an ordinary viewing distance.

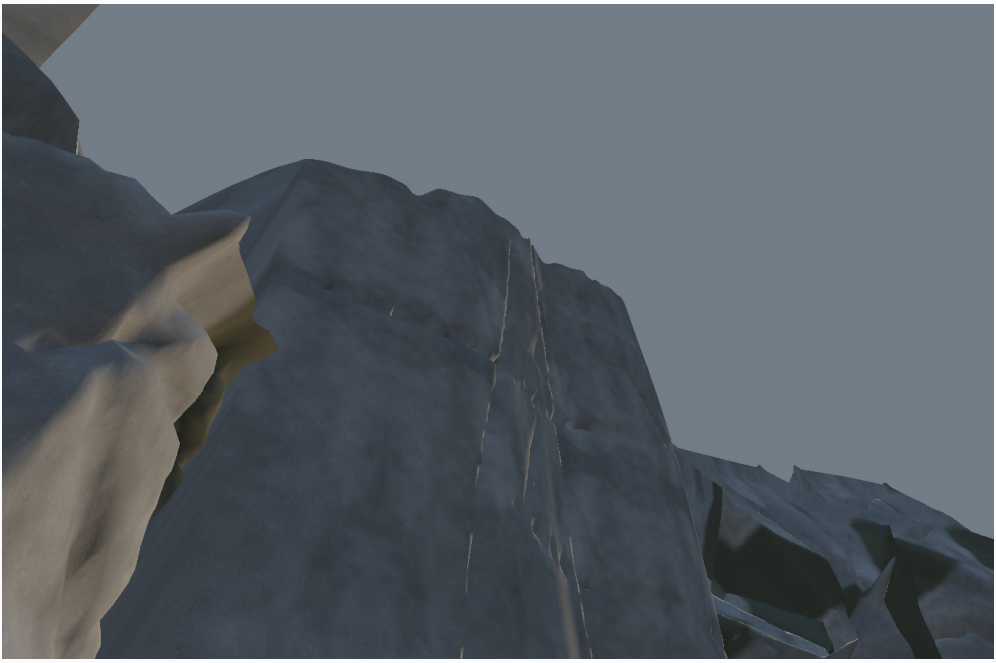

05 Low-angle upper edge

Matched camera, lighting, viewport, quality and effective DPR

BEFORE - existing Stage 2C

AFTER - refined sections 22 + 23

Look for remaining sharp peaks or artificial wall terminations.

06 Looking along the wall

Matched camera, lighting, viewport, quality and effective DPR

BEFORE - existing Stage 2C

AFTER - refined sections 22 + 23

Inspect volume, recesses and the relationship to nearby rocks.

07 Quarry context

Matched camera, lighting, viewport, quality and effective DPR

BEFORE - existing Stage 2C

AFTER - refined sections 22 + 23

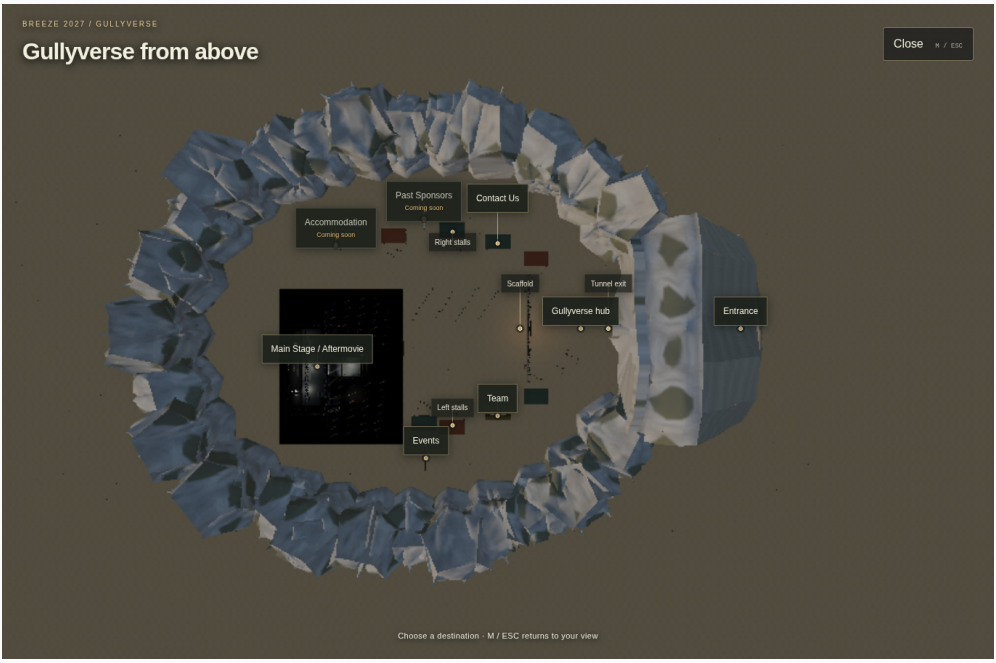

Only the selected pair is refined; the rest remains Stage 2C.

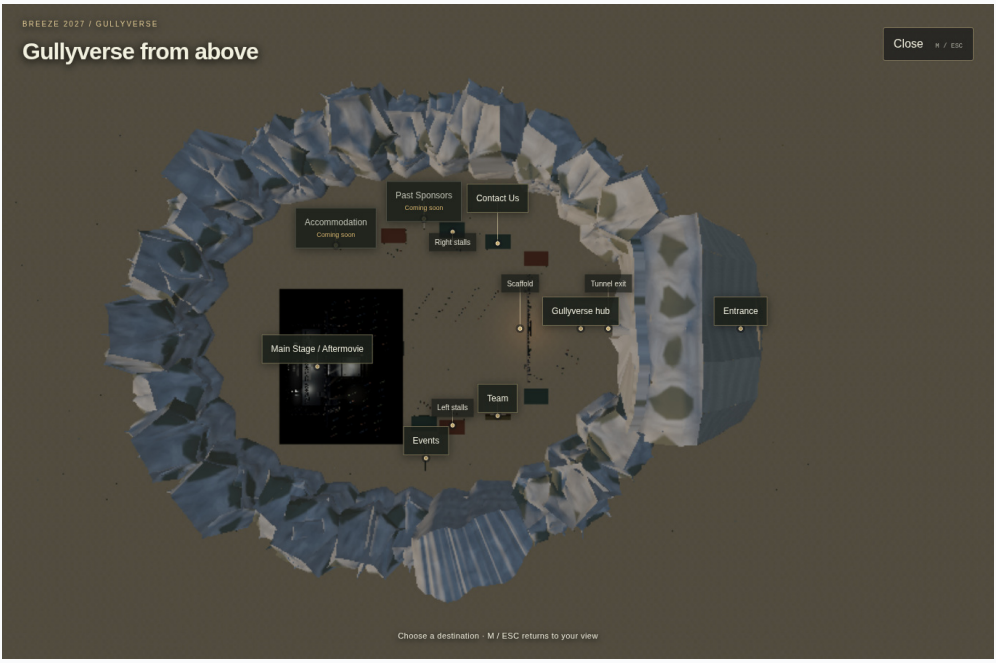

08 Aerial map

Matched camera, lighting, viewport, quality and effective DPR

BEFORE - existing Stage 2C

AFTER - refined sections 22 + 23

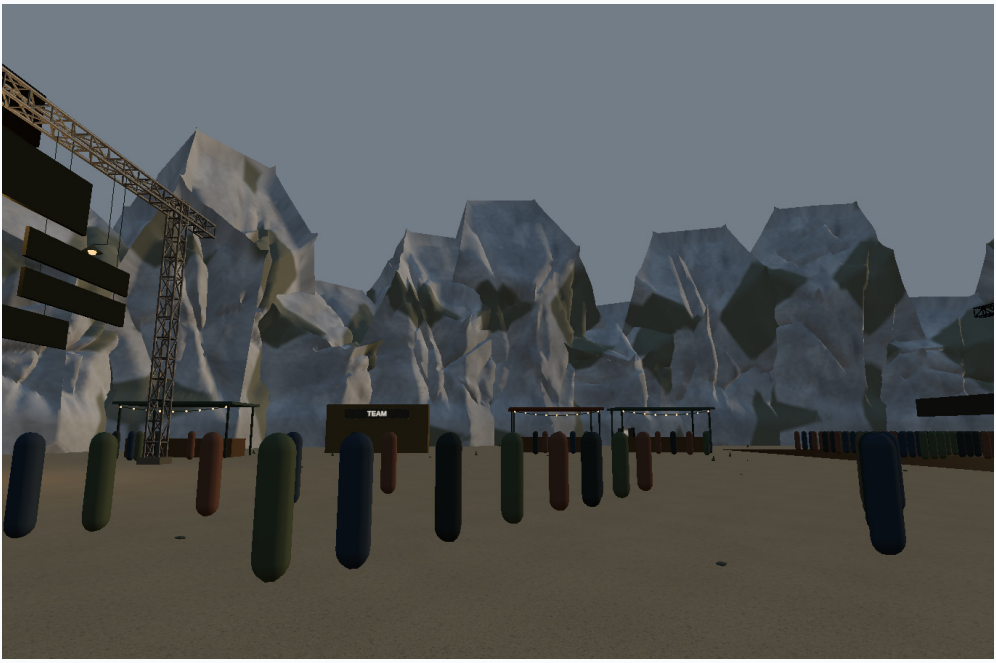

Check the perimeter segment within the unchanged quarry footprint.

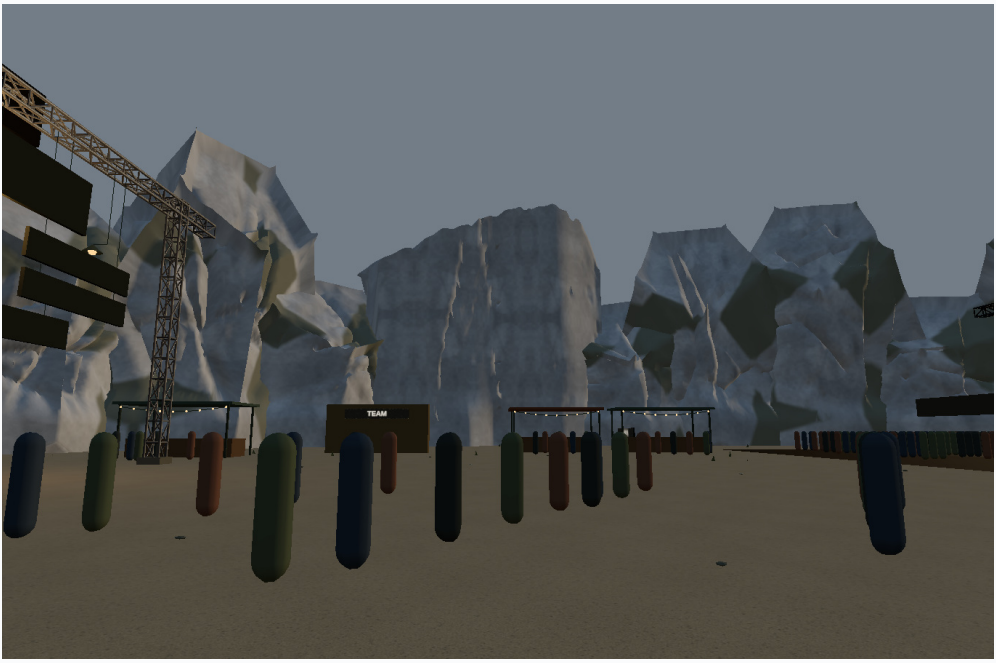

09 Long-distance wall

Matched camera, lighting, viewport, quality and effective DPR

BEFORE - existing Stage 2C

AFTER - refined sections 22 + 23

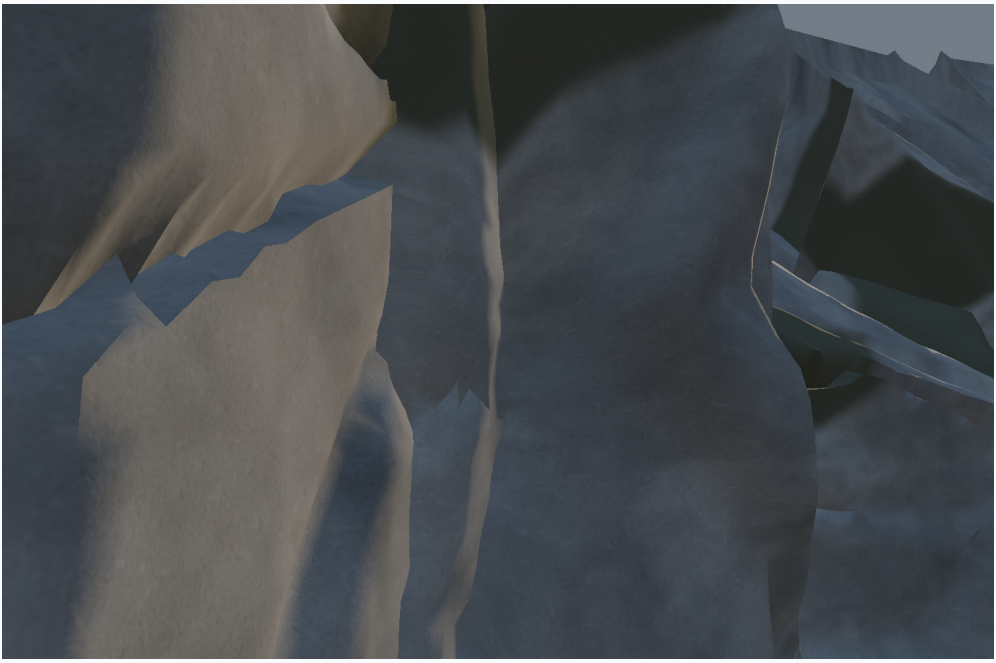

Check the silhouette and how the pair sits among the other walls.

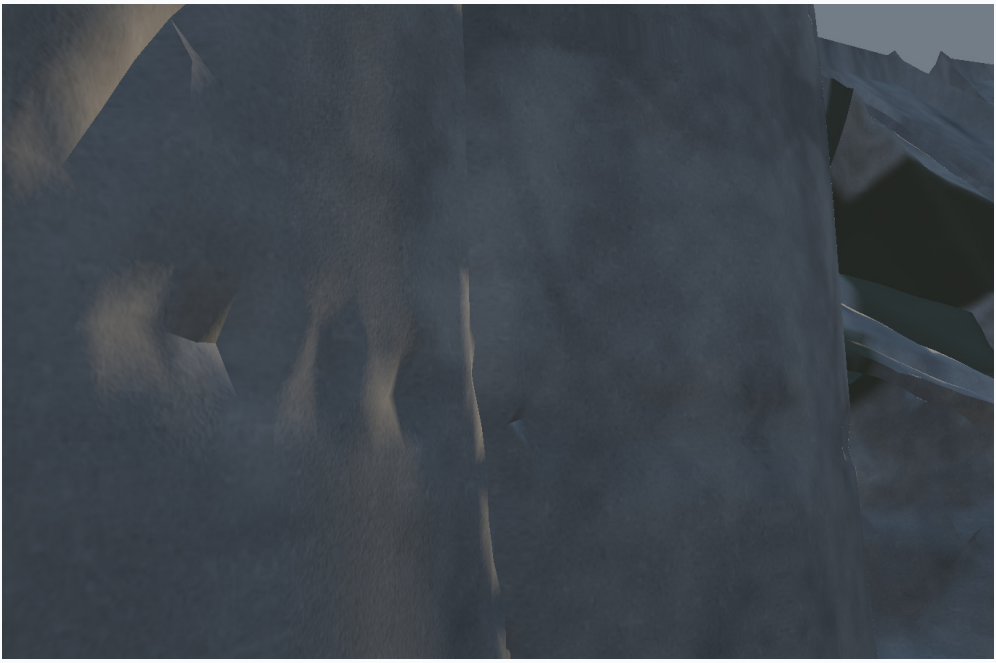

10 Join close-up

Matched camera, lighting, viewport, quality and effective DPR

BEFORE - existing Stage 2C

AFTER - refined sections 22 + 23

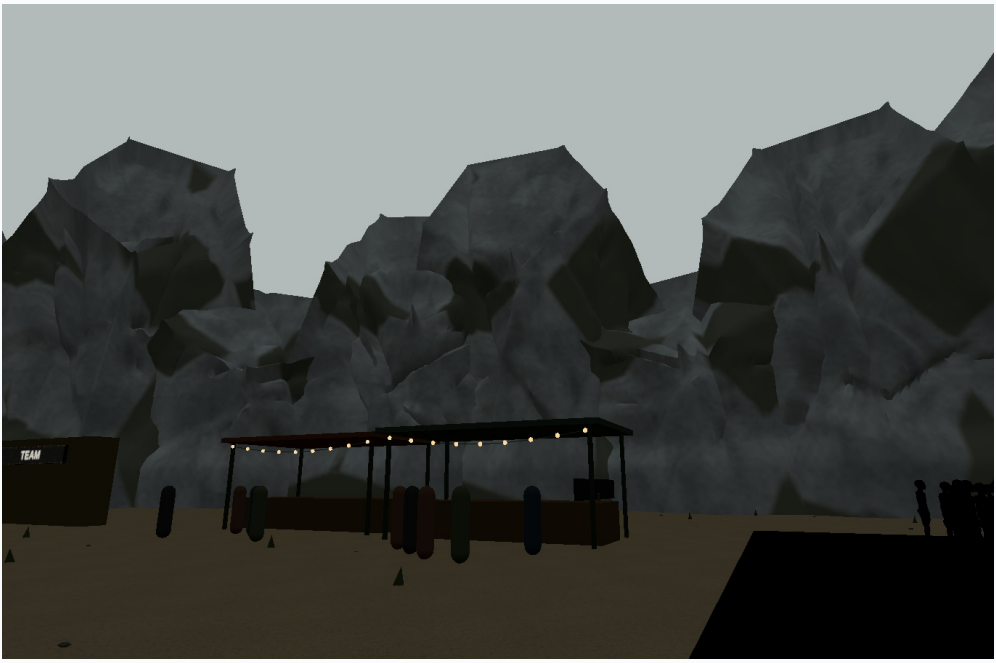

The near-vertical highlighted joint is a remaining review point.

11 Aftermovie lighting

Matched camera, lighting, viewport, quality and effective DPR

BEFORE - existing Stage 2C

AFTER - refined sections 22 + 23

Same camera and stage lighting; check the limestone response.

12 Portrait wall view

BEFORE - existing Stage 2C | 390 x 844 browser viewport, not physical iPhone profiling

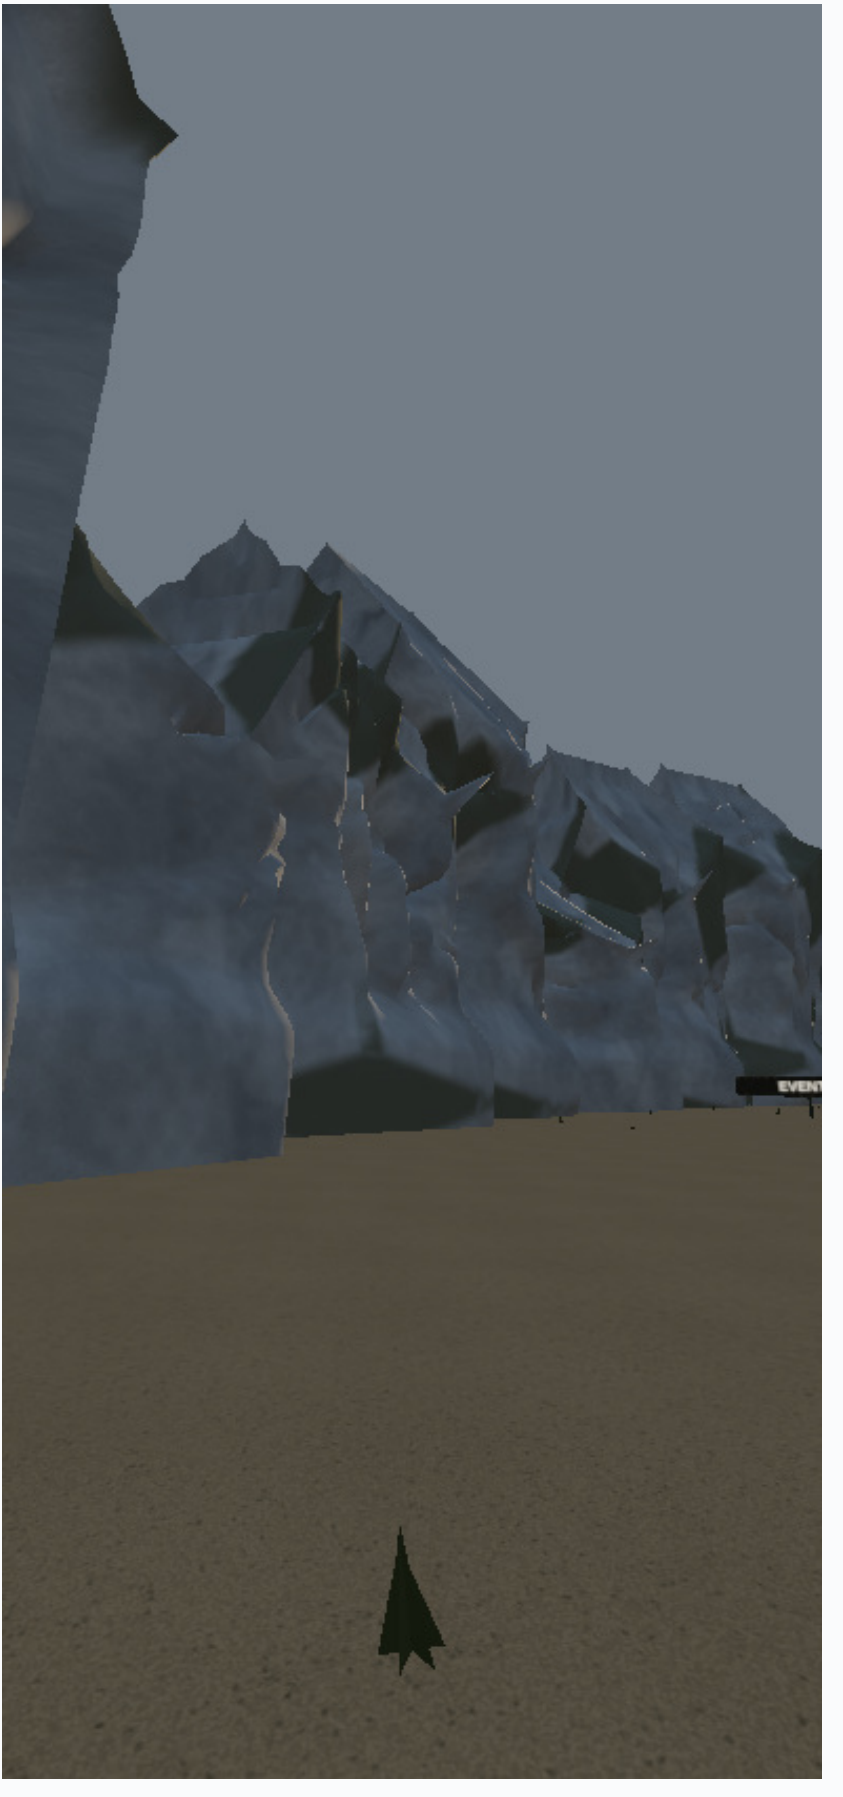

12 Portrait wall view

AFTER - refined pair | 390 x 844 browser viewport, not physical iPhone profiling

13 Portrait medium view

BEFORE - existing Stage 2C | 390 x 844 browser viewport, not physical iPhone profiling

13 Portrait medium view

AFTER - refined pair | 390 x 844 browser viewport, not physical iPhone profiling

14 Portrait quarry context

BEFORE - existing Stage 2C | 390 x 844 browser viewport, not physical iPhone profiling

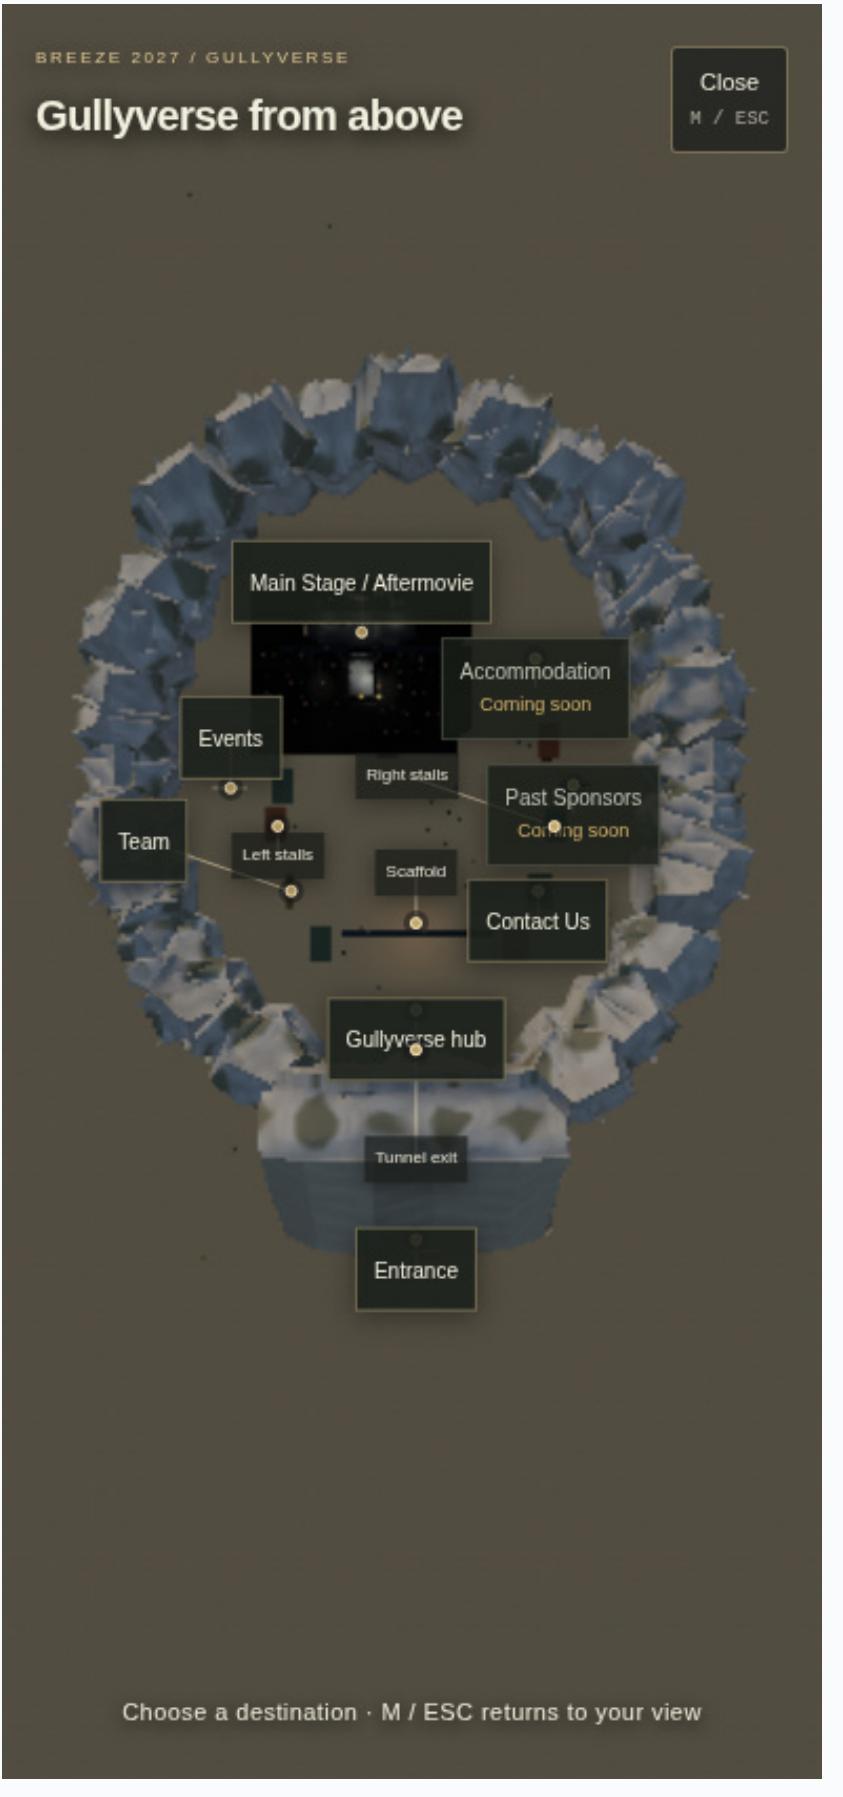

14 Portrait quarry context

AFTER - refined pair | 390 x 844 browser viewport, not physical iPhone profiling

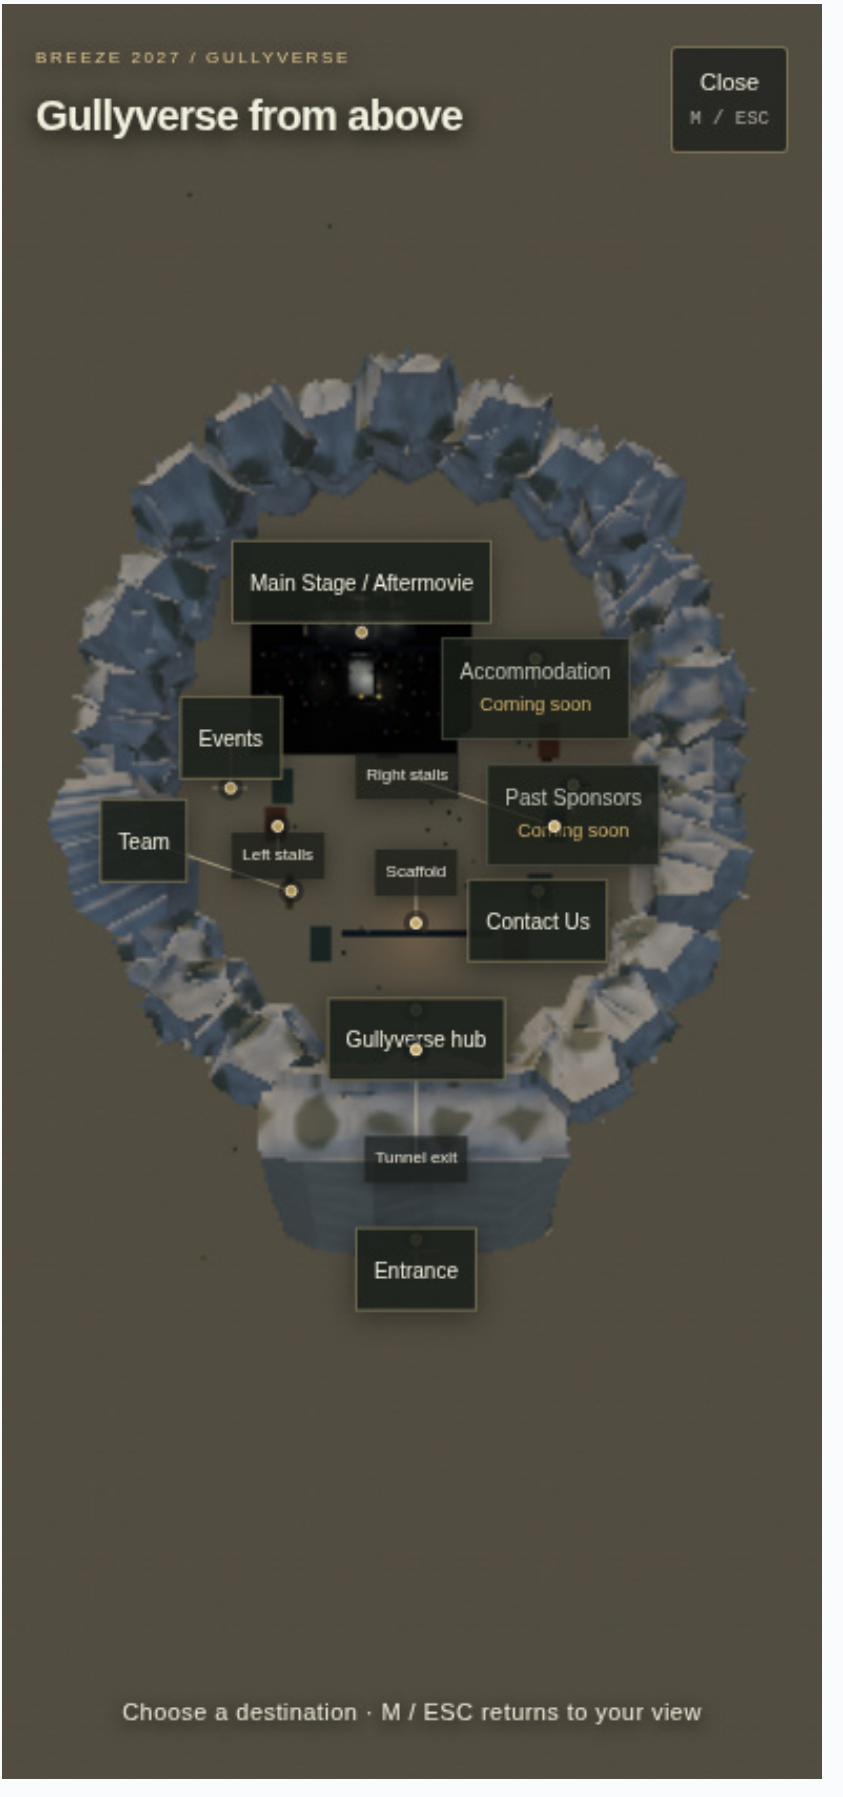

15 Portrait aerial map

BEFORE - existing Stage 2C | 390 x 844 browser viewport, not physical iPhone profiling

15 Portrait aerial map

AFTER - refined pair | 390 x 844 browser viewport, not physical iPhone profiling

16 Near detail - LOD0

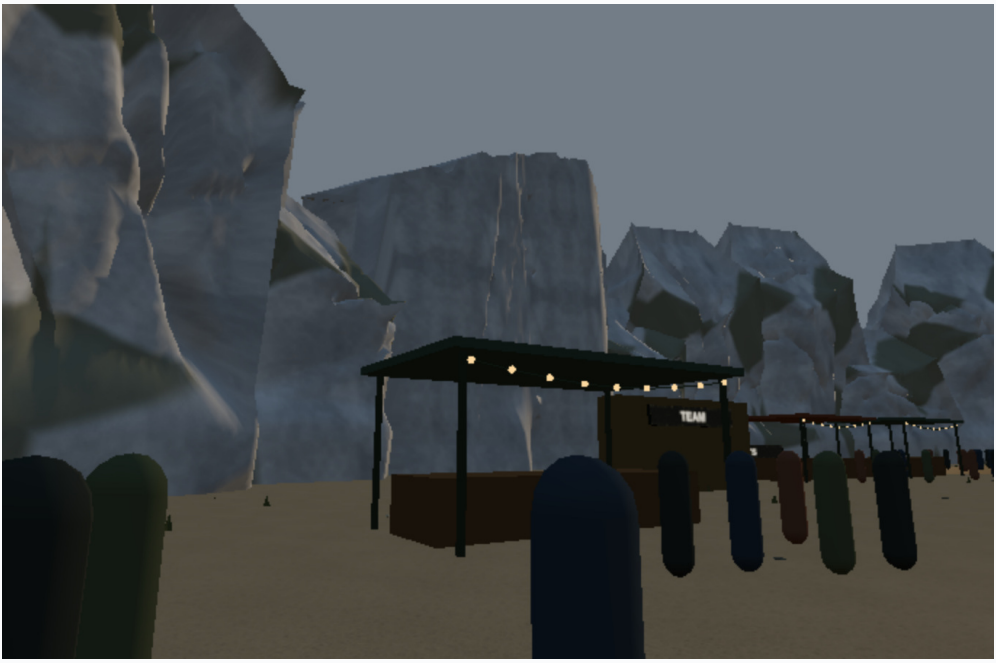

Actual runtime-selected level; only one visual LOD drawn at a time

These images are taken at different distances. They document real LOD selection; they are not matched-camera before/after pairs.

17 Middle detail - LOD1

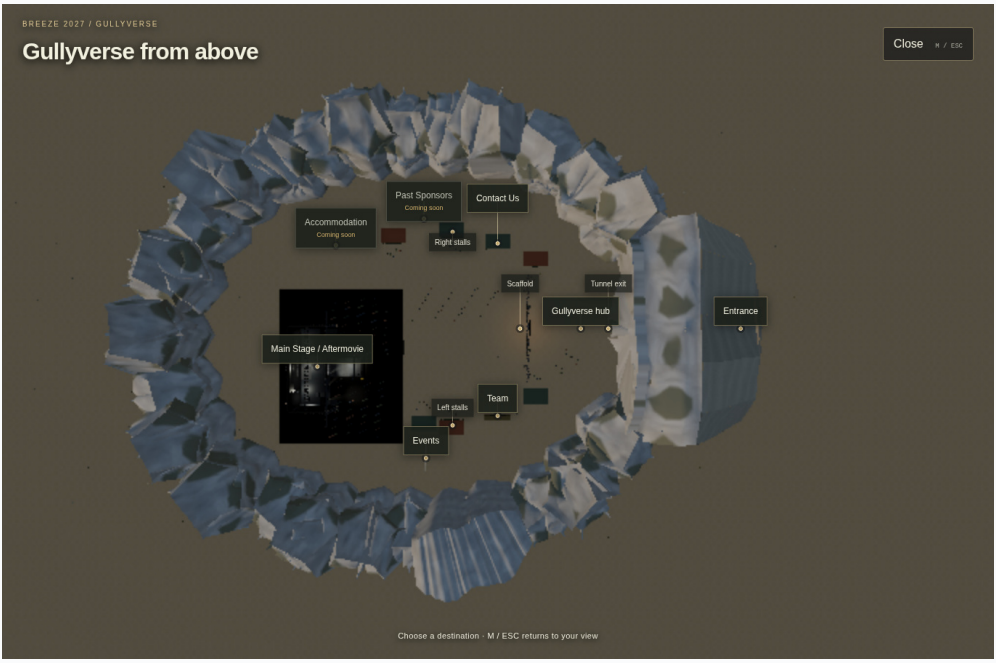

Actual runtime-selected level; only one visual LOD drawn at a time

These images are taken at different distances. They document real LOD selection; they are not matched-camera before/after pairs.

18 Aerial detail - LOD2

Actual runtime-selected level; only one visual LOD drawn at a time

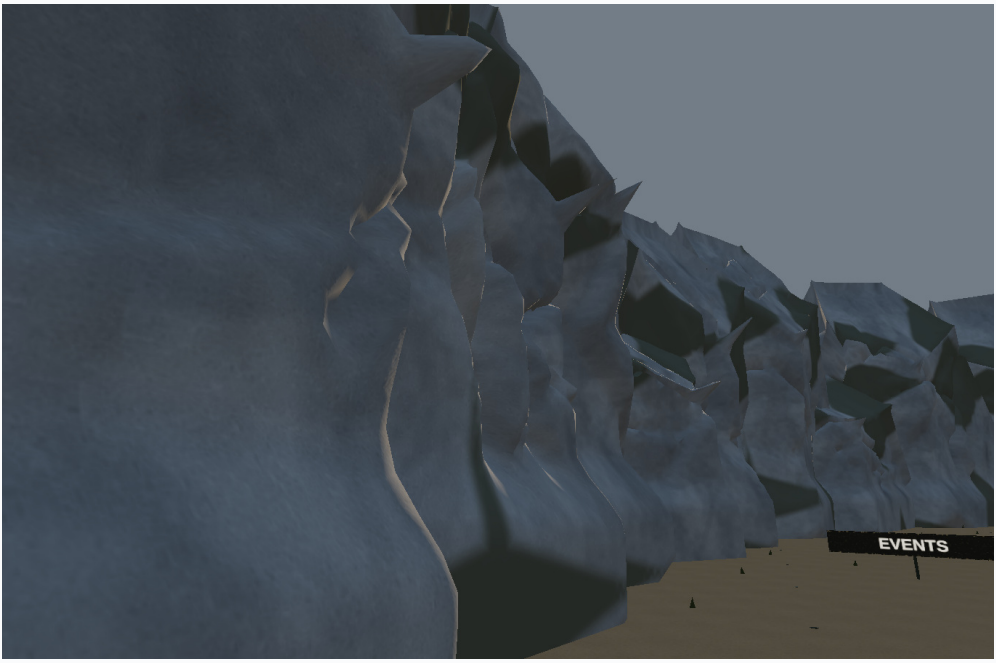

These images are taken at different distances. They document real LOD selection; they are not matched-camera before/after pairs.

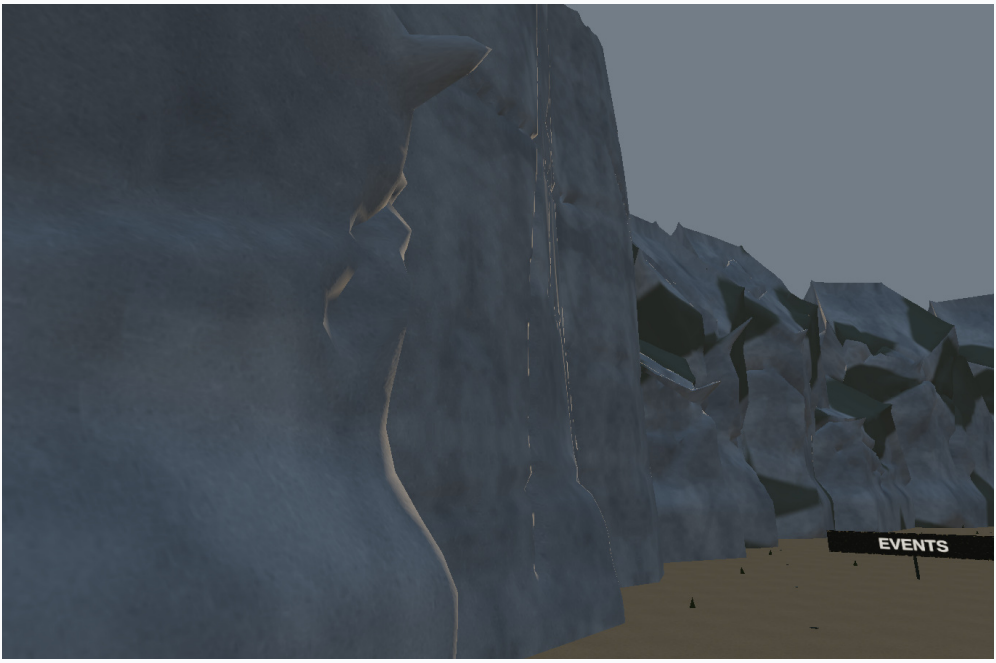

19 Normal-map isolation

Diagnostic view - not the final material

BEFORE - existing Stage 2C

AFTER - refined sections 22 + 23

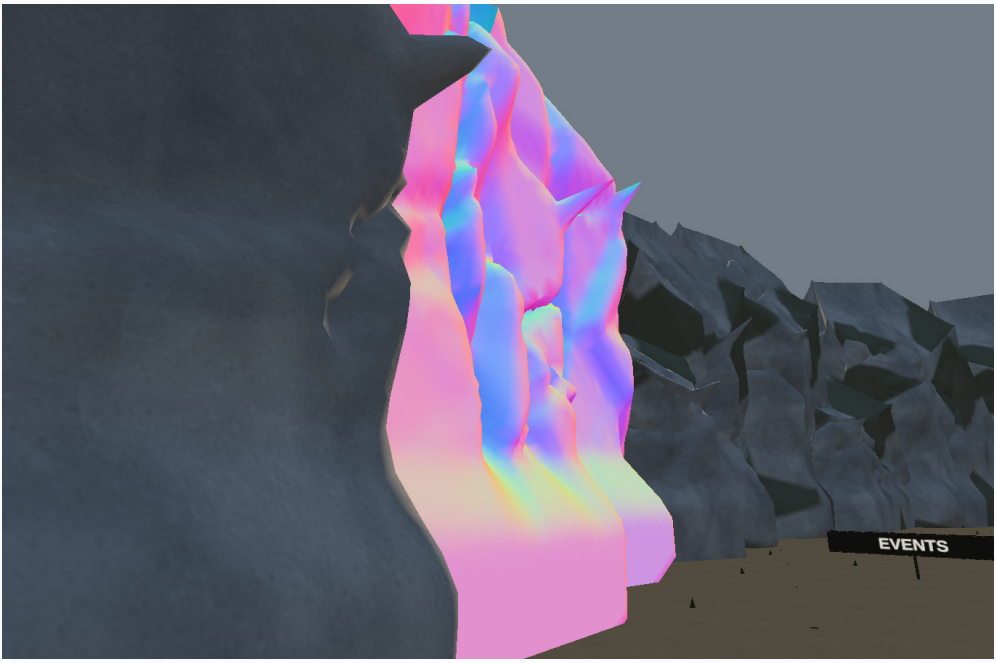

Optional diagnostic capture for the dark-recess investigation. The normal review screenshots use the unchanged approved material.

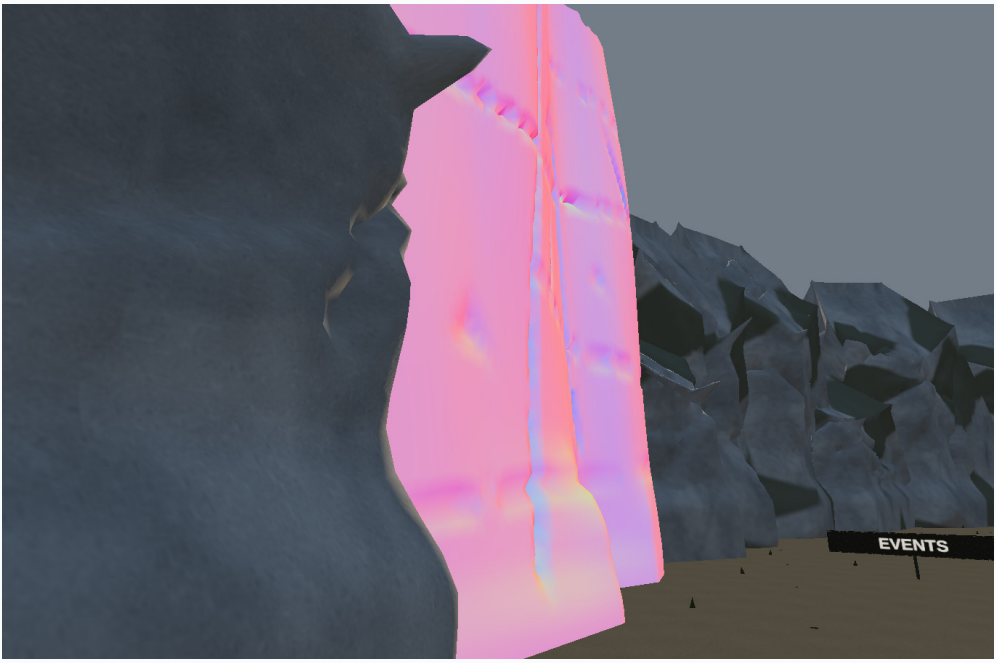

20 Geometry normals

Diagnostic view - not the final material

BEFORE - existing Stage 2C

AFTER - refined sections 22 + 23

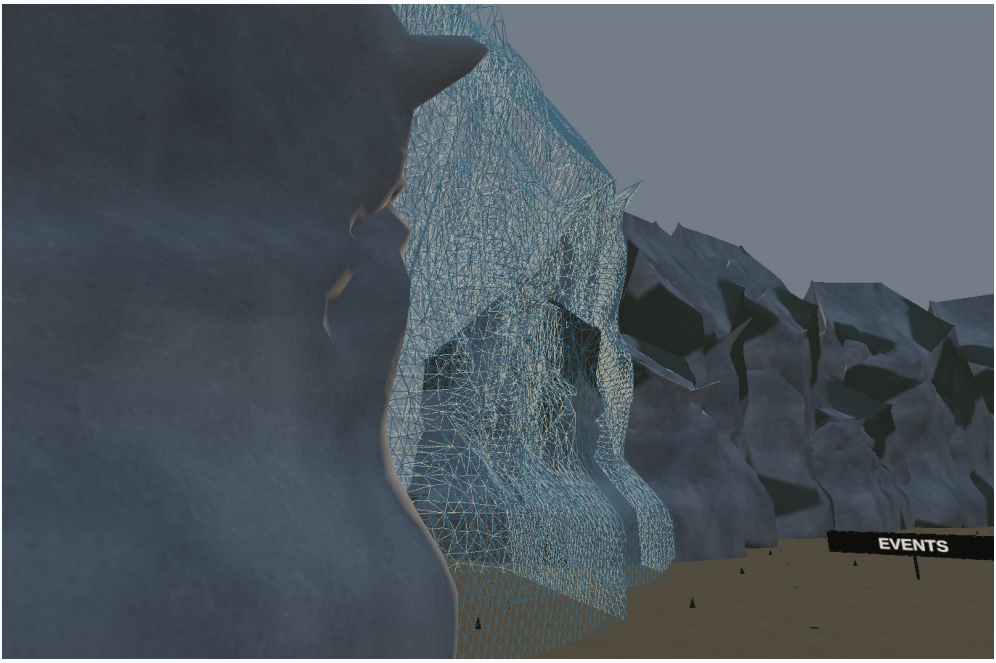

Optional diagnostic capture for the dark-recess investigation. The normal review screenshots use the unchanged approved material.

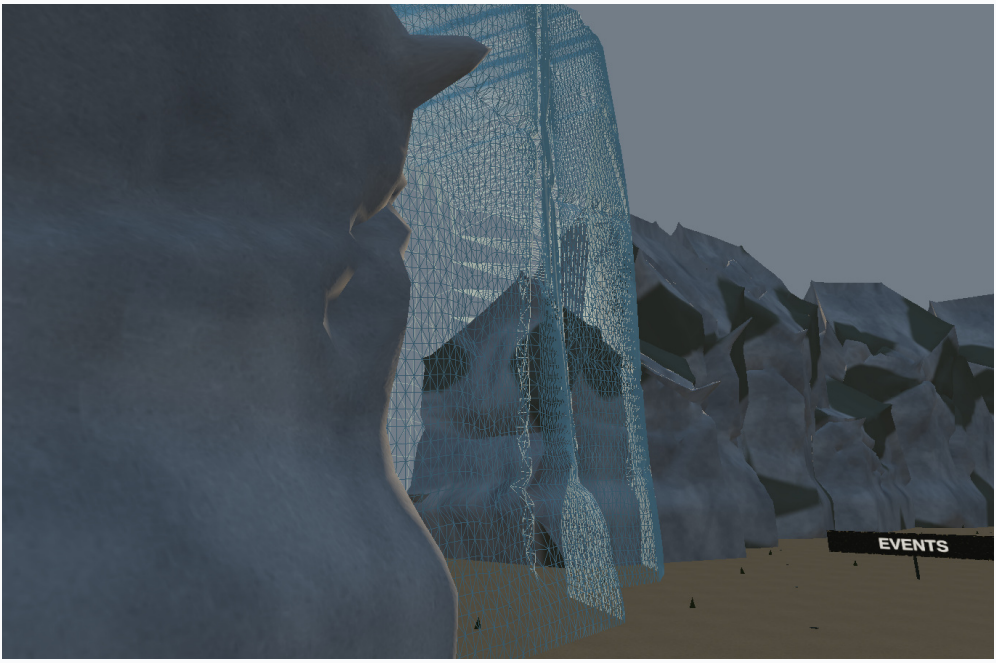

21 Mesh wireframe

Diagnostic view - not the final material

BEFORE - existing Stage 2C

AFTER - refined sections 22 + 23

Optional diagnostic capture for the dark-recess investigation. The normal review screenshots use the unchanged approved material.

What to look for

Visual review remains open; no rollout beyond this pair

Does the upper wall read as an excavated quarry rather than repeated pointed mountains?

Do the adjoining sections feel connected from the front and from an oblique angle?

Does the highlighted near-vertical joint look like a believable fracture, or still like a seam?

Does the limestone retain the colour, grain and roughness you approved?

Are the top and ground transitions convincing at close, medium and far distances?

Included technical evidence

The ZIP contains the original report, camera metadata, test summary and resource measurements. Editable Blender sources and runtime GLBs remain in the separate full technical ZIP.

Starting branch: codex/navigation-board. Revision: e3dbbc233f1f. No commit, push or deployment was performed for this review package.
